PROJECT NAME	**IoT Based Safety Gadget for Child Safety Monitoring & Notification**
TEAM MEMBERS	**BANDLA VENU MADHAV(Leader)** **BALUSUNDAR T S** **KUMAR A** **SARAVANAN V**

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behaviour, and other aspects of the software to project stakeholders.

- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.
